Education

Bachelor of Applied Science in Software Development, GPA 3.7
Bellevue College

Bellevue, WA / June 2025

Experience

Software Engineer - Ace Rocket (EdTech Startup)

Remote - WA / January 2025 – September 2025

An online learning web platform that helps students prepare for math exams

- Developed a student performance analytics dashboard using JavaScript and Firebase to track and display real-time quiz results across four math topics used by 150+ users
- Owned the data-driven daily plan feature that analyzes user performance history including accuracy rate, topic, and difficulty to generate a personalized set of practice questions
- Deployed backend services with secure API endpoints and validated functionality using Postman to ensure to ensure reliable data delivery
- Improved web responsiveness and user experience by troubleshooting JavaScript and styling issues with Google DevTools
- Authored internal documentation outlining Firebase data models, algorithm logic, and implementation workflows for the performance tracking and daily plan modules

Academic Projects

Full-Stack Developer & Tech Lead - TiriVelo Pet Services

Remote - Canada / January 2025 – June 2025

Capstone project – a commercial cross-platform mobile application for pet booking services

- Led full-stack development using React Native, TypeScript, PostgreSQL, and Supabase to enable users to book and manage pet services across devices
- Designed and implemented the database schema with role-based access control to secure feature-specific operations
- Controlled global state with React Context API and TypeScript for scalable data flow
- Wrote strict type-safe functions to ensure responsible data handling and reduce runtime errors
- Orchestrated agile team collaboration and stakeholder communication, created tasks, coordinated development priorities, and maintained alignment with project goals

Software Developer - Hospital Management System

June 2024

A desktop healthcare management system that automates patient, staff, and inventory workflows

- Developed a Windows Forms application using C# and .NET to manage hospital operations and streamline staff and patient data entry
- Implemented secure role-based access and full CRUD functionality to enable secure, hospital administration
- Integrated SQL Server and MongoDB for scalable medical data storage and record retrieval

Skills

Languages: JavaScript, Typescript, HTML, CSS, C#

Frontend: React.js, React Native, Tailwind

Backend: Node.js, Express.js, .NET, ASP.NET Core

Databases Technologies: PostgreSQL, SQL Server, MongoDB

Cloud Platform & Services: Google Cloud, Azure, Firebase, Supabase

Tools and More: Git, GitHub, Playwright, Unit Testing, Jira, Figma, Postman, Linux CLI
